THE READING

From <http://www.breakingnewsenglish.com/1405/140503-superbugs-0.html>

Horror movies about superbugs killing people might come true.

The WHO said many medicines no longer work. Bugs have become stronger. This is very dangerous. Nobody is safe.

Superbugs can kill people in rich and poor countries. Many antibiotics that worked 30 years ago do not work now.

The WHO described a scary future. Now we take medicine to make illnesses go away. In the future, diseases like malaria and influenza will kill again. This is not a regional problem. It is happening in poor, developing and rich countries. The WHO said: "This is something which is [happening] in all countries in the world."
